SQL Language

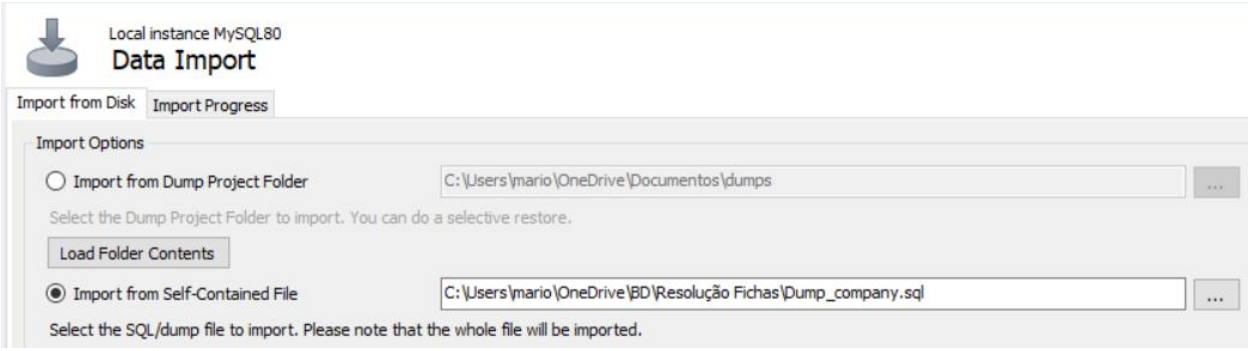

FICHA

1. In the MySQL workbench, click on the ***Administration*** area;
2. Select ***Data Import/Restore***;

   The purpose is to import a script file (also named backup or dump file) available in Moodle.

   The script contains the database structure as well as data.
3. Click on ***Import from Self-Contained File*** and select the ***dump_company*** file;

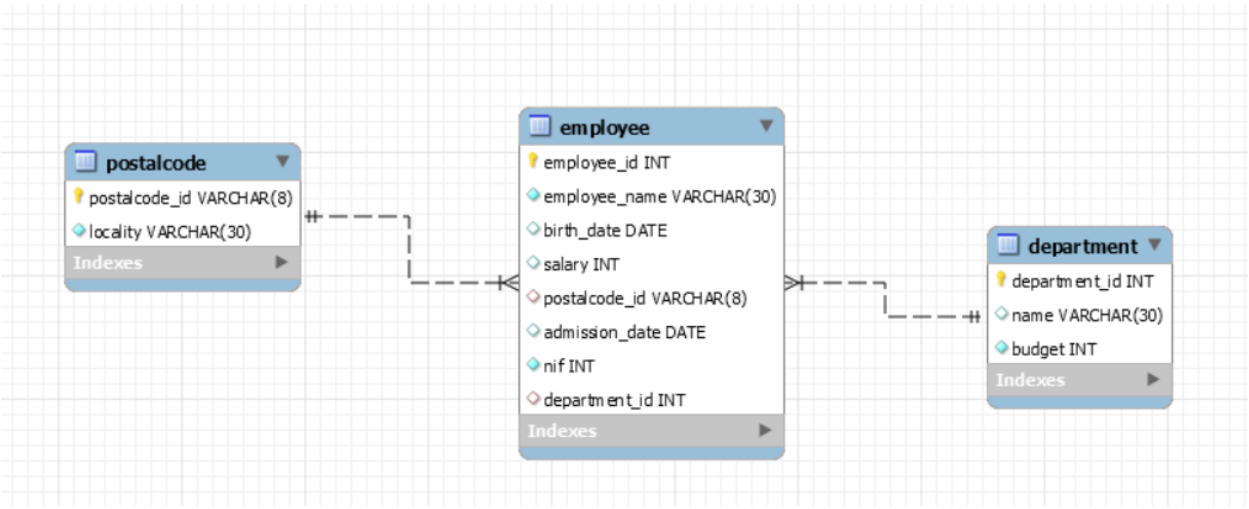

4. Finally click on ***Start Import*** button.
5. Click on ***Schemas*** area;

6. Click the right mouse button and select ***Refresh All***; you should now view the company database.
7. Generate the EER Diagram (*Database > Reverse Engineer*)

8. Construct the SQL Queries that allow the following results:

8.1 All employees of the company (all attributes)

8.2 All employees (only name and department_id)

8.3 Employees (employee_id and employee_name) with salary higher than € 1.500

8.4 Employees (employee_id and employee_name) with salary between € 1.500 and € 2.000

8.5 Employees (employee_id and employee_name) with salary between € 1.500 and € 2.000 and belonging to department 1 or 3

8.6 Employees (all attributes) belonging to departments 1, 3 and 5.

8.7 Employees (all attributes) that do not belong to departments 2 or 4.

8.8 Employees (all attributes) whose date of admission is between 2001-04-01 and 2008-01-01

8.9 Employee_id and name of employees whose postalcode starts at 4000

8.10 List postalcodes associated with the location of "Gaia"

8.11 List employee records whose name begins with "José" or "Jose"

8.12 List employees whose name begins with "M"

8.13 Get number of employees in department_id 2

8.14 Get number of employees admitted in the years 2007 or 2008

8.15 Names of employees whose name includes "Antunes"

8.16 Average value of the budget in all departments

8.17 Average salary of employees in departments 1, 3 and 4

8.18 Number of employees in which the postalcode begins with 4000 (ie belongs to Porto)

8.19 Get the higher salary of department 1
