1. Import the database backup file **Dump_VideoPlatform** (available in Moodle)

You should get the database **video_platform** with the following scheme:

VIEWS

2. Write a script with the following SQL statements:

   a) Create a view named **filmsWithClassificationView** with data from the films (id_filme, titulo, ano) and classification (desc_classificacao);

   b) Select, from the previous view, the films rated M6 and M12;

c) Create a view named **filmsWithGenresVie**w with the films (id_filme, titulo, ano, duracao) and respective genres (desc_genero);

d) Obtain, from the previous view, the number of films by genre (desc_genero);

e) Obtain, from the previous view, the average duration of films by genre;

f) Remove the views created in the meantime;

g) Create a view named **filmsComedyView** with films (id_filme, titulo, ano) related with the genre "comédia"
The view that does not allow violating data integrity restrictions.
Select the data from this view;

h) Create a view named **filmsClassifTodosView** with films (id_filme, titulo, ano, desc_classificação) with classification "Todos"
The view that does not allow violating data integrity restrictions.
Select the data from this view;
